EDUCATION

STRAKE JESUIT COLLEGE PREPARATORY (Class of 2028) Houston, TX | Class of 2028

Cumulative GPA: 4.61; Highest Honor Roll

Relevant Coursework: AP Computer Science (5), AP Statistics (currently taking), AP Calculus (currently taking) | 4 AP Courses taken (2 5s, 3 4s), 5 taking

WORK EXPERIENCE

APPYBARA Remote

Software Engineering Intern Jul 2026 - Aug 2026

- Developed features and infrastructure for an AI-powered college admissions platform serving 2,000+ daily active users
- Wrote, tested, and merged a deterministic AI scoring system inside the Appybara chat interface that reduced college "chance-me" score variance from 0.49 to 0.00 (100% reduction) by introducing score anchoring
- Validated production AI observability through PostHog LLM traces and analytics events, confirming end-to-end monitoring of AI generations in production
- Designed and built a scalable AI-powered outreach pipeline integrated with Avian to generate personalized outreach campaigns for prospective college students, helping drive user acquisition and profile completion
- Collaborated with the engineering team weekly on production software, code reviews, experimentation, and feature development for a rapidly growing startup

Technologies: Python, TypeScript, Next.js, AI APIs, PostHog, Linear, Git, GitHub, Product Analytics, Prompt Engineering

PROJECTS

MOCHI 2026

- Built an AI nutrition coach that enables users to log meals by text, photo, or voice note directly in iMessage, eliminating the need for a dedicated app
- Pitched and received a Second Place Award at the Ink Magazine Pitch Competition
- Developed features including calorie and macro tracking, proactive daily check-ins, streaks, milestone badges, barcode scanning, Apple Health sync, and personalized coaching powered by conversational AI

FORGE 2026

- Architected a self-improving AI agent system that automatically writes, tests, and rewrites its own agents across generations, keeping only code changes that measurably raised accuracy
- Built in 30 hours for the Agent Orchestrator Syndicate Hackathon and was awarded $100 in AI credits by AI Grants India, placing the project in the top 9% of applications
- Engineered a persistent memory loop that let the same agent code improve with zero code changes, raising holdout accuracy from a flat 28.6% baseline to 35.7% (peaking at 42.9%) as the memory store grew from 44 to 80 learned entries
- Shipped 4 scored task domains and a zero-build browser dashboard visualizing learning curves and memory growth, backed by 235 passing tests across 101 commits and 29 merged PRs

AVIAN 2026

- Developed an AI outreach platform that researches prospects and generates personalized outreach campaigns
- Designed campaign management ("Flights") and automated profile generation
- Integrated web search, AI profile generation, and personalization to dramatically reduce manual outreach time

LIMBO 2025

- Spearheaded a productivity-focused download manager that automatically treats downloaded files as temporary.
- Designed a workflow where files expire after a configurable timer unless explicitly saved by the user.
- Created a clutter-free download experience by automating file cleanup while preserving important files.

ADDITIONAL

Technical Skills: Advanced in Python, TypeScript, JavaScript, React, Next.js, HTML/CSS, SQL, Git, GitHub, Convex, Firebase, Supabase, AI APIs, Machine Learning, Computer Vision, Prompt Engineering

Certifications & Training: Harvard AI Bootcamp (Jan 2025), Lumos Fellowship (Full Ride Scholarship, ~7% acceptance rate, Sep 2026) AI/ML Independent Study, Full-Stack Web Development (Self-Taught)
Leadership: Speaker at Upward Bound Summer Academy; taught students how to use AI tools and functions to achieve greater academic success
